

Range Systems has been an industry-leading solution provider of live fire facilities since 1994. Our team has an extensive history of engineering, fabricating and installing superior performing ProTacts™ sidewalls worldwide. We have set the standard for range safety, durability, unique capabilities and unmatched ballistic performance within our ProTacts™ sidewall solutions.

At Range Systems, we understand that every project is unique and requires thoughtful planning and consideration. Through decades of experience our team is ready to work with you in selecting the ProTacts™ sidewall solution to meet your needs.

Product Overview

ProTacts™ Tactical Ballistic Sidewalls provide a safe and effective space when more dynamic, off the mark training is desired. The rifle rated Tactical Sidewall System is constructed of 3/8-inch AR500 steel plate covered with 2-inch thick Dura-Panel™ ballistic rubber adhered directly to the front face of the steel plate. This allows for intentional and repeated firing into the sidewalls when conducting down range, tactical training. Rifle rated Sidewall Systems can accept up to 7.62 / .308 calibers.

Key Features & Benefits

- Easily added or attached to multiple types of existing wall structures
- Ideal for ranges where concrete ceilings or tactical baffles are present. This allows users to directly engage the sidewalls practicing dynamic real-life move and shoot scenarios safely, even at point blank distances. This provides training options not available in most ranges.
- Minimize the potential safety hazards of erratic ricochets and back splatter from bullets impacting this area of the range. This application also offers noise abatement by absorbing sounds and reducing reverberation.
- The combination of ballistic and acoustic components provides a safer and cleaner range environment as well as more versatile shooting activities, giving a distinct advantage for those who have an interest in next level training.
- Expand capabilities to a range offering: advanced training not available in typical qualification ranges, additional marketing opportunity, create an additional revenue stream with a different offering
- Tested and approved with the US Army Special Operations Command (USASOC) to meet their evolving training requirements and is now recognized as the training standard for USASOC

Clearview

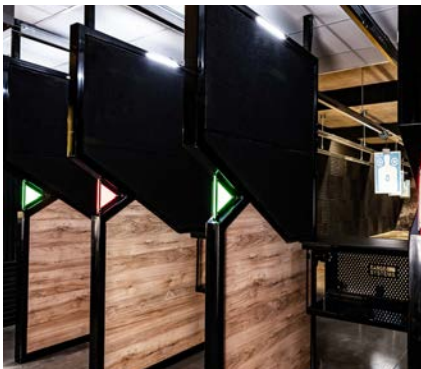

- Constructed of rifle or pistol rated ballistic glass in a steel framework for protecting shooting lanes
- Provides an open view of the firing line and shooters
- Offers the same protection as Pro-Tacts Standard but with visibility of the firing line and occupants to provide an unobstructed view
- The ballistic glass panels can be detailed to include your logo or company name

Pro-Tacts Combo

- Constructed of a combination of Dura-Panel™ ballistic rubber, AR500 steel plate, and a ballistic glass panel it provides you the benefits of our Clearview and Pro-Tact, combining open sight lines along with privacy, safety, and sound reduction.
- Delivers firing line visibility, a deeper footprint to accommodate an instructor and shooter, and the ballistic and acoustic values of our Pro-Tacts Standard

Fortress

- Fully customizable from floor to ceiling
- Designed for performance and built for safety
- Available in different sizes so that it can be easily integrated into new or existing range layouts

Mobile Shooting Stall

- Constructed of 1/4-inch AR500 steel plate and 2-inch thick Dura-Panel™ anti-ricochet ballistic rubber panels adhered directly to both sides of the steel
- Minimizes side blast interference from adjacent shooting lanes and reduces the hazard of misdirected shots
- Provides tactical mobility
- Heavy duty casters allow easy movement and locking placement in stalls
